Ball segment valve KVT/KVX KVTF/KVXF

Edition: 2024-05

- Control- and shut-off valve
- High capacity
- Ball segment and shaft made in one piece, gives a torque transmission free of backlash
- Excellent tightness irrespective of differential pressure

Option

- LN (Low Noise Trim)
Ball segment with low noise trim for high ΔP
- KVM-ball segment with V-port for high fibre concentrations

Product Information

The Somas ball segment valve type KVT with a centrally mounted shaft, and K VX with an eccentrically mounted shaft are of wafer design. Type KVTF is a flanged version with centrally mounted shaft while KVXF is a flanged and eccentric design.

The valves in this data sheet are of top entry design. Short face to face dimension, low weight and small space requirement make the installation of these valves very easy. Somas unique shaft device is designed for torque transmission and gives backlash-free operation with accurate control. The shaft is guided in the valve body and stuffing box sleeve. The spring loaded seat is available in PTFE, PTFE 53 and HiCo.

The valves can be used for control, as well as for shut-off applications on practically every type of media within a wide temperature range. Choose KVT/KVTF for liquids, media containing impurities etc. For dry and clean media choose K VX/KVXF. In the K VX/KVXF valve the ball segment is eccentrically mounted and rotates out from the seat when the valve is opened. This reduces the wear on seat and segment.

Low noise (LN) trim is available as an option. The designation "LN" indicates that the ball segment is equipped with a network of bars that are used to split up the pressure drop across the valve. This results in less pressure recovery, thereby reducing the noise and potential damage due to cavitation. In addition the "LN" trim can tolerate media containing a small amount of fibers or particles.

Ball segment with V-groove is available for use at high fibre concentrations. The V-groove design prevents de-watering at small opening angles.

Somas valves are delivered ready for installation and operation. The valve assemblies are delivered factory tested as complete units with actuators, positioners and accessories.

Flange standard

Somas ball segment valves type KVT and K VX with nominal size DN 25/2 – 65 are flangeless and should be clamped between flanges.

The valves type KVTF and KVXF with nominal size DN 25/2 – 50 are flanged and can be drilled according to PN 10 - 50 and ASME B16.5:2003 Class 300. When ordering, please always state the pressure rating of the counter flanges. See the valve specification system code 13.

Option

Within the process industry and the energy sector there are a number of applications where process data in combination with standard control valves will end up with problems such as high noise level and erosion. These problems are mostly related to cavitation and high flow velocities inside the valve.

Note! By using a standard ball segment valve and add a noise reduction trim many of the above mentioned problems can be solved.

See data sheet Si-108 for more theoretical information.

For controlling suspensions with high fibre concentrations it can be advantageous to use valves with a V-groove to reduce the risk of de-watering at small opening angles.

Further technical information

Technical data for the materials used in the Somas valves, flange standard, steam data, etc. can be found in documents library on www.somas.se.

Actuators and accessories

The valves can be fitted with gear units, Somas on/off or control actuators in accordance with the selection table. The valves will then be delivered as tested units ready for installation.

In the documents library on www.somas.se there is also information about positioners, limit switches and solenoid valves.

We can also fit other types of actuators and accessories in accordance with your specification.

Capacity factors and remaining factors for valves with LN-trim and valves with V-groove are available in the valve sizing program SOMSIZE.

Valve sizing

Use Somas valve sizing program SOMSIZE to find the correct valve size. All sizing factors are included in the program.
